INTRODUCTION

Responding to snow and ice events is a city-wide endeavor requiring efforts from governmental departments, private contractors, and local citizens. The removal of on-street snow and ice in the City of Georgetown is a combined effort between the Georgetown Public Works Department (GPW) and the Kentucky Transportation Cabinet (KYTC).

The GPW is responsible for removing snow and ice on approximately **112 centerline miles** of Dedicated City streets and up to approximately **23.4 centerline miles** of Not Dedicated streets. Centerline miles represent the total length of a given street from its starting point to its end point but does not represent the length of streets actually plowed. Plows typically make passes based on the number of lanes on each street. These are considered lane miles and are approximately two to three times the measured centerline miles here in Georgetown. The KYTC is responsible for all federal and state roads.

In addition, other departments within the City and County work together relaying both time critical information and poor condition locations where additional effort is needed to increase vehicular safety. The following section will outline each involved department including their roles, responsibilities and key contact numbers.

Every fall, representatives from these departments meet to review and update this Snow Removal Management Plan for the upcoming winter season. In addition, GPW coordinates the long-range planning, equipment preparation, material procurement and route planning for snow removal.

The following factors are considered when establishing procedures and protocols for snow removal and when evaluating their effectiveness in minimizing a storm's impact on the community:

- Rate and accumulation of snowfall
- Moisture content
- Presence of sleet and freezing rain
- Temperature variations
- Wind velocity
- Time of day or night
- Storm duration
- Intervals between storms

ROLES AND RESPONSIBILITIES

In order to efficiently conduct a safe and effective snow and ice response it is integral for various departments to synchronize their efforts. The following departments are the driving force of the response:

GEORGETOWN PUBLIC WORKS (GPW)

The GPW is the primary winter storm responder to all snow and ice events. Their goal is to provide a safe and sufficiently mobile transportation network throughout the City of Georgetown by delivering professional snow removal and traction control services during adverse winter weather conditions.

As the managing unit of the effort, citizens are requested to initially contact the GPW for any questions and concerns regarding active snow removal efforts and refuse collection services at the number listed in the table on the [Key Contact Numbers](#) section.

911 CENTER

The Georgetown Scott County 911 Center provides call taking and dispatching services for the general public and the public agencies serving Georgetown and Scott County. During snow events, the 911 Center also provides road condition reports and serves as a critical point of contact relaying information between agencies about their needs and locations. Additionally, the 911 Center manages a list of all currently available emergency response units to assist with ensuring that the proper number and type of units can respond to multiple emergencies.

NON-EMERGENCY CITIZEN MEDICAL TRANSPORTATION SERVICES

The GPD and GFD are committed to providing transportation to healthcare workers who provide healthcare services and citizens who have special medical needs or medications by utilizing a small fleet of military Humvees and four wheel drive vehicles during inclement weather emergencies. Citizens who wish to request this service are asked to call the 911 Center at their non-emergency phone number listed in the table on the [Key Contact Numbers](#) section.

GEORGETOWN POLICE DEPARTMENT (GPD)

The GPD serves as the primary emergency responder to most calls and is typically the first agency on the scene. They have the capability to deliver service in the most extreme conditions and operate 24 hours a day during these times. GPD assists snow clearing efforts by patrolling streets to report specific road conditions and to ensure that all Emergency Snow Routes and Secondary Streets are clear of parked cars when a Snow Emergency is declared. These patrols also serve to locate disabled, stuck and/or abandoned vehicles where officers can provide immediate assistance to motorists. GPD participates in the Non-Emergency Citizen Medical Transportation Service program by providing Humvees.

GEORGETOWN FIRE DEPARTMENT (GFD)

The GFD serves as a primary responder to fires and supports GPD for accidents. They also have the capability to deliver service in the most extreme conditions and operate 24 hours a day. GFD supports snow clearing efforts by patrolling streets to report street hazards and assist motorists. They also participate in the Non-Emergency Citizen Medical Transportation Service program by providing four wheel drive vehicles.

EMERGENCY MANAGEMENT AGENCY (EMA)

The EMA / OHS monitors the event via radar and other weather tools. They coordinate with the National Red Cross if shelters are needed as well as respond to serious weather related incidents including major vehicular accidents and any other reports of damage resulting from the storm.

MAYOR'S OFFICE

The Mayor's Office serves as an additional contact between responding departments and the public. Depending on the severity of the storm and the condition of responding City departments, the Mayor may declare a Snow Emergency to protect the safety, health and welfare of citizens and City employees. When a Snow Emergency is declared, the Mayor's Office will contact local news agencies and the public as outlined in the [Public Notices, Alerts and Media](#) section.

PARKS AND RECREATION (PR)

Parks and Recreation is responsible for clearing snow and ice from access streets and parking areas located within parks or near PR facilities. Some of these facilities include: the Ed Davis Learning Center, the Pavilion, areas around Cardome, Scott County Community Park and Royal Springs. During heavy or extended storm events PR may temporarily close facilities if determined that it's unsafe for employees to get to work. More information about PR's snow removal efforts and the status of facility availability can be found on their website listed in the [Public Notices, Alerts and Media](#) section.

PR SNOW REMOVAL PRIORITY LIST FOR FACILITIES

- | | |
|-----------------------------|--|
| 1. The Pavilion | 6. Suffoletta Park |
| 2. Ed Davis Learning Center | 7. Marshall Park |
| 3. Scott County park | 8. Brooking Park (walking trail) |
| 4. Brooking Park (streets) | 9. All other facilities to be addressed as |
| 5. Cardome Park | resources are available |

CEMETERY

The Cemetery staff is primarily responsible for clearing snow and ice from travel ways throughout the Cemetery. Once complete, they assist GPW's street clearing efforts in the southeastern downtown area.

WEATHER MONITORING

During the snow and ice season, the Emergency Management Agency (EMA) serves as the primary designee charged with forecasting weather events. EMA continuously monitors the weather using:

- In-House Weather Instrumentation
- USGS Information Systems
- Local Flood Poles
- Radar
- Direct Communication with the National Weather Service (NWS) in Louisville

In addition, GPW also observes National Oceanic and Atmospheric Administration (NOAA) weather data as well as local area media forecasts supplementing the data received from the EMA.

FOUR CONDITIONS ROAD ADVISORY LIST

The Four Conditions Road Advisory List was developed in order to systematically advise the public of road conditions and when necessary, emergency procedures that must be followed. The current condition will be posted on the City's website as outlined in the [Public Notices, Alerts and Media](#) section.

During local snow and ice events, the GPW Sanitation Department utilizes the "Conditions" established in this plan when considering modifications to the daily refuse collection services. The GPW Sanitation Department will obtain the current condition rating from GPW and will consult with other partnering agencies to determine the future weather impact on the City of Georgetown. PR also refers to these "Conditions" when determining whether or not to delay or close their facilities.

The Four Conditions Road Advisory List below dictates when sanitation services may be suspended and when and where motor vehicles are permitted to be parked on City streets.

CONDITION GREEN

- Snow is absent from roadways
- Ice is absent from roadways
- Travel is unrestricted on all roads with normal caution
- Full refuse collection services – unrestricted
- PR facilities are open during regularly scheduled hours

CONDITION YELLOW

- Snow accumulation is under two (2) inches
- Ice accumulation is minimal and/or localized to small areas
- Travel is unrestricted on all roads with extra caution
- Full refuse collection services - unrestricted with minimal delays
- PR facilities are typically open during regularly scheduled hours

CONDITION ORANGE

- Snow accumulation is over two (2) inches
- Ice accumulation is severe and/or widespread
- Travel is unrestricted on all roads with extreme caution
 - Unnecessary trips should be avoided
 - Vehicles with all-wheel or four wheel drive recommended
- Full/Partial refuse collection services – routes may be modified and/or severely delayed
- PR facilities will have a delayed opening

CONDITION RED

When conditions become so severe that parking must be restricted for safety, snow plowing, snow/ice removal efforts or other emergency response services; the Mayor will declare a Snow Emergency which consists of the following two (2) stages:

SNOW EMERGENCY STAGE 1 (SE1)

- Parking is prohibited on all streets designated as Emergency Snow Routes
 - Vehicles parked on designated Emergency Snow Routes will be towed
 - Residents are asked to make every effort to park vehicles off-street on all roads to facilitate snow removal
- Travel is unrestricted on all roads with extreme caution
 - All unnecessary trips should be avoided
 - Vehicles with four wheel or all-wheel drive recommended
- Minimal refuse collection services
 - Refuse collection services are suspended
 - Emergency collections will be permitted as determined by GPW
- PR facilities are indefinitely closed

SEVERE SNOW EMERGENCY STAGE 2 (SSE2)

- Parking is prohibited on all streets designated as Emergency Snow Routes
 - Vehicles parked on designated Emergency Snow Routes will be towed
 - Residents are asked to make every effort to park vehicles off-street on all roads to facilitate snow removal
- Travel is unrestricted on all road with extreme caution
 - All unnecessary trips should be avoided
 - Vehicles with four wheel or all-wheel drive recommended
- Refuse collection services are indefinitely suspended
- PR facilities are indefinitely closed

PUBLIC NOTICES, ALERTS AND MEDIA

This Snow Removal Management Plan is available on the City of Georgetown's website for the public and media to ensure that anyone who may be affected by snow and ice events can learn about Georgetown's notification and operating procedures. In the event of an extreme weather event where conditions dictate that the Mayor declares a Snow Emergency; the media will be directly notified by the Mayor's Office and emergency notifications will be posted on the City's website. Once the Snow Emergency has passed and the Condition Advisory Rating has dropped to Orange or below, the City will provide notification through the City's website and Facebook Page.

Information and notifications will be provide through the following outlets:

- City of Georgetown's Website
- City of Georgetown's Facebook Page
- EMA Website
- EMA Twitter Account
- EMA Facebook Page
- Parks and Recreation Website
- Parks and Recreation Facebook Page
- Parks and Recreation Twitter page
- News Graphic

STREET CLASSIFICATIONS AND RESTRICTIONS

This Snow Removal Management Plan defines every street within the City as either an [Emergency Snow Route](#), [Secondary Street](#), [Tertiary Street](#), [Not Dedicated Street](#), [Private Street](#) or [State Road](#). The City does not maintain State, County and Private Streets. Not Dedicated Streets may be maintained by the City if the Responsible Entity (RE) provides a liability waiver to the City. The RE is usually either the developer, Home Owners Association (HOA) or property owner.

The City maintained streets have been defined as Emergency, Secondary or Tertiary to prioritize levels of effort and to impose vehicular restrictions, when necessary, to improve safety and the efficiency of the snow and ice removal response. In general, higher priority streets support larger numbers of the traveling public and are cleared first to increase safer travel conditions for the majority of the public. Priority is typically defined by:

- Traffic Volume
- Street Width
- GSCPC Subdivision Regulation Street Classifications
- Emergency, School and Special Hazard Areas (Bridges, Hills and Curves) - see [Appendix 4](#)

Crews will first complete snow plowing efforts on Emergency Snow Routes followed by Secondary and Tertiary Streets in that order. When all City maintained streets are plowed once, the crews return, by priority to the streets that need to be re-plowed or on an as-needed basis as dictated by the conditions of the storm. Emergency, School and Special Hazard Areas are also re-examined at this time.

A map of the aforementioned designations can be found in [Appendix 1](#) or viewed through an interactive online map, developed by the Georgetown Scott County GIS Department, which can be accessed at <http://gis.gscplanning.com/snow-removal/>. This map color codes streets by Emergency Snow Route, Secondary Streets, Tertiary Streets and Not Dedicated Streets (provided waivers). A complete list of streets by segment is provided in [Appendix 5](#).

In addition, GPW has separated the City into four (4) quadrants or Snow Plowing Zones which are generally divided by US 25 (Broadway) running north-south and US 460 (Main Street / Paris Pike) running east-west. Each zone is assigned one or two operators who salt and plow a route designed to maximize clearing streets by their priority rating. Occasionally, the initial route may include lower priority streets when it becomes more efficient to include them. A complete map and of the designated zones can be found in [Appendix 2](#).

Finally, a complete map of streets not maintained by the City can be found in [Appendix 3](#) or online at the link above. Streets not maintained by the City include:

- State and County Roads
- Not Dedicated Streets where the RE has not provided a damage waiver
- Private Streets within residential areas where the RE has not contracted with and has not provided a damage waiver to the City

EMERGENCY SNOW ROUTES

The City of Georgetown has designated, with appropriate signs, approximately **54.4 centerline miles** of roadway as Emergency Snow Routes. These streets are generally described as 'boulevard' or 'local collector' as defined by the Subdivision and Development Regulations and typically connect Secondary Streets to arterials and other high volume streets. Disabled or parked vehicles along these roadways can reduce removal effectiveness and increase accidents when snow plowing operations are underway. During a Snow Emergency, the GPD is permitted to remove, or have removed, any vehicle from the Emergency Snow Route to facilitate safety, movement and/or snow removal efforts.

This may occur when the following conditions are met:

- The vehicle is parked in an area designated as an Emergency Snow Route when:
 - A Condition Red Snow Emergency Stage 1 (SE1) has been declared
 - A Condition Red Severe Snow Emergency Stage 2 (SSE2) has been declared
- The vehicle is stalled or disabled on the normally traveled portion of any public roadway and the owner is not attempting to remove the vehicle

SECONDARY STREETS

The City of Georgetown has designated approximately **57.7 centerline miles** of roadway as Secondary Streets. These streets are generally described as 'continuous' by the Subdivision and Development Regulations and typically connect tertiary streets to collectors (Emergency Snow Routes). Parking is permitted on these streets during all snow events, however it is recommended that all vehicles be relocated off-street. Disabled vehicles along these roadways may be removed by the GPD when the following conditions are met.

- The vehicle is stalled or disabled on the normally traveled portion of any public roadway and the owner is not attempting to remove the vehicle

TERTIARY STREETS

The City of Georgetown has designated approximately **22.3 centerline miles** of roadway as Tertiary Streets. These streets are generally described as 'local' by the Subdivision and Development Regulations and typically consist of cul-de-sacs, dead end streets, alleys and other low volume streets serving a limited number of properties. Parking is permitted on these streets during all snow events, however it is recommended that all vehicles be relocated off-street. Disabled vehicles along these roadways may be removed by the GPD when the following conditions are met.

- The vehicle is stalled or disabled on the normally traveled portion of any public roadway and the owner is not attempting to remove the vehicle

NOT DEDICATED STREETS

Not Dedicated Streets are streets in developing neighborhoods that are intended to be dedicated to the City once certain requirements are met. There are approximately **23.4 centerline miles** of Not Dedicated Streets here in Georgetown. The City of Georgetown will provide snow and ice removal services on Not Dedicated Streets provided that the RE has executed a liability waiver on a form provided by the Public Works Department. This waiver shall be in place by October 1 of each year to provide time to update this plan and shall be renewed on an annual basis. If no waiver is provided, the responsibility to clear streets of snow and ice remains with the RE. In this situation, the RE is required by ordinance to start clearing streets when visible accumulation of snow or ice begins and shall have those streets clear within 24 hours after final snowfall or ice accumulation.

PRIVATE STREETS

Private Streets are streets that are not intended to nor have been dedicated to the City for maintenance and therefore shall not be maintained by the City. There are approximately **21.1 centerline miles** of Private Streets here in Georgetown. These streets are typically located in small residential developments, apartment complexes, commercial areas, industrial zones and institutional areas.

STATE AND COUNTY ROADS

State and County Roads are not maintained by the City of Georgetown. There are approximately **58.5 centerline miles** of State Roads here in Georgetown. State Roads located within the City of Georgetown are maintained by the Kentucky Transportation Cabinet District 7. County Roads are maintained by the Scott County Road Department. Refer to Key Contact Numbers section for information on how to contact these entities.

TOWING AND IMPOUNDMENT

When the above conditions are met, the GPD removes a vehicle by contacting one of the local towing companies previously under contract with the City. Vehicles are removed by the private company and relocated to their individually designated impoundment areas. Car owners can find information on how to retrieve their vehicle by calling the GPD at **502-863-7826**.

TREATING THE ROADS

Agencies across the state treat roads using various methods, equipment and materials tailored to their climate, equipment, staffing capacities, funding capabilities and procurement limitations. Even with such diversity, agencies typically follow a five step process outlined below and is followed by the City of Georgetown's approach to this process.

- Pre-Treatment
- Initial Effort
- Maintenance Effort
- Final Effort
- Recovery

PRE-TREATMENT EFFORT

Pre-Treatment typically involves spraying a brine solution or spreading rock salt (sodium chloride) prior to the storm event. Rock salt is the most widely used de-icing agent in the United States because of its cost and melting effectiveness. When the temperature is above 25 degrees Fahrenheit, salt can melt several inches of snow and prevent or reduce the bonding of compacted snow to the pavement surface. However, salt is less effective at temperatures below 25 degrees Fahrenheit and/or when traffic volumes are too light to activate the chemicals. For lower temperatures, a ratio of nine (9) gallons of liquid calcium chloride can be added to every ton of sodium chloride (rock salt). The calcium chloride reacts with salt to create melting at temperatures down to 20 degrees below zero.

The GPW currently stockpiles a minimum of 3,000 tons of rock salt to begin the snow season. In addition, the City typically has an agreement with a rock salt producer to provide additional salt at a unit rate. GPW does not pre-treat before every winter storm; only when the forecast calls for a snow or ice accumulation event that warrants salting. When GPW decides to pre-treat, City streets are salted in the order of their priority as outlined in the Initial Effort section below.

INITIAL EFFORT

The Initial Effort typically involves the first round of plowing emergency facilities and streets according to a pre-developed plan of action. This plan details routes that are based on the priority of each street as well as the realistic capabilities of current equipment and personnel available for use. The City of Georgetown has determined the priority of streets, in descending order of priority, as outlined in the Street Classifications and Restrictions section. Crews will be dispatched to their respective quadrant and begin snow removal efforts based on that plan. The Initial Effort ends once all City maintained streets have been cleared once. The amount of snow, type of snow and/or ice, and the duration of the storm event all affect the amount of time it takes to complete each priority street making it impossible to develop an accurate completion timeline. Generally, GPW aims to clear all streets within the first 24 hour period of the storm.

MAINTENANCE EFFORT

The Maintenance Effort does not necessarily occur during every storm. Typically, the Maintenance Effort only occurs during longer duration storms that require multiple passes over routes, previously cleared during the Initial Effort, when snow or ice continue to accumulate.

When the conditions are met to begin the Maintenance Effort, the GPW will re-clear streets based on the priority system as outlined in the Street Classifications and Restrictions section. Often this period is also used to remove snow and/or slush from storm drain inlets to increase drainage. Snow that has melted will often harden or turn to ice when it is not permitted to drain from the roadway further clogging storm drains. This reduces the effectiveness of snow clearing methods and can substantially increase the amount of time it takes to clear streets. In addition, Special Hazard Areas are revisited to determine if further salting, clearing or other action is required. A working map of Special Hazard Areas can be found in [Appendix 4](#).

FINAL EFFORT

The Final Effort typically begins when snow and/or ice has ceased accumulating and the majority of streets are generally clear. Activities during this period include final clearing of:

- Snow / Slush / Ice from Storm Drain Inlets
- Snow Mounds from Intersections / Cul-De-Sacs
 - Residents/Occupants are Responsible for Mounds in Front of Private Driveways
- Public Parking Lots
- Remaining Snow Stockpiles

In addition, Special Hazard Areas are revisited to determine if further salting, clearing or other action is required.

[Refuse collection](#) is often resumed at this point if it was restricted during a Snow Emergency, however this depends on the landfill being open and accepting waste. The landfill is operated by a private entity and may not have recovered from the storm by this time.

RECOVERY EFFORT

Once snow and ice clearing has been completed and the streets are in an acceptable condition for safe travel, the Recovery Effort begins. During this period the following activities are performed:

- Crews Inspect, Maintain and Clean Equipment
- Salt Usage and Stores are Evaluated
 - Quantity of Salt Used is Determined
 - Quantity of Salt Remaining is Estimated
 - Additional Salt is Ordered Based on Thresholds

GPW HOURS OF OPERATION

During snow events, the GPW's supervisors are on call 24 hours a day and 7 days a week on a rotating basis. Contact information can be found in the [Key Contact Numbers](#) section. In the case of a Snow Emergency, GPW's crews work 12-hour shifts around-the-clock throughout the Initial Effort period.

GPW EQUIPMENT

The GPW has on hand, equipment capable to respond to the majority of winter storms. In the event of an extreme emergency situation or equipment breakdown, GPW may employ the use of Private Snow Removal Providers as outlined in the next section.

Currently, the GPW is able to employ the following equipment:

- Eight (8) Trucks with Plows
 - Four (4) Dump Trucks
 - Five (5) One-Ton 4x4 Pickup Trucks
- One (1) Front-End Loader
- One (1) Skid Loader
- One (1) Bobcat
- One (1) Backhoe

PRIVATE SNOW REMOVAL PROVIDERS (PSRP)

When severe snow or ice accumulation occurs, the City of Georgetown may contract with PSRPs who provide snow and ice removal services. These providers are used to assist the GPW only where additional manpower and equipment are required to protect public safety. Typically, PSRP efforts will focus on Tertiary Streets.

PSRPs interested in providing this service shall execute a contract with the City prior to performing any work. The current rate offered by the City of Georgetown is \$100 per hour for plowing and salting. All PSRPs shall only perform work only in areas as directed by the GPW director.

REFUSE COLLECTION POLICY IN SNOW OR ICE EVENTS

City regulations and public health protection require that the GPW's Sanitation Department provide refuse collection regardless of weather conditions. The exception is in emergency situations such as heavy snow and ice when administrators, for the safety of its employees and the public, can suspend all collections to keep its heavy vehicles off streets until road conditions improve. Collections for snow and ice events can be suspended as outlined in the Four Conditions Road Advisory List section. When suspended, the Mayor's Office will provide notification to the public through the channels outlined in the [Public Notices, Alerts and Media](#) section.

PROPERTY OWNER/RESIDENT RESPONSIBILITIES AND HELPFUL TIPS

As a property owner, resident or visitor here in Georgetown, there are activities that you can do to help respond to snow and ice events. The following Responsibilities section details what activities are required by ordinance and the subsequent [Helpful Tips](#) section outlines a few recommendations to help your personal snow removal effort be as efficient as possible. When the City as a collective performs their individual responsibilities, the response as a whole can be much more effective.

RESPONSIBILITIES – ORDINANCE 15-016

NOT DEDICATED STREETS

The City of Georgetown will provide snow removal and treatment on streets that have been platted for dedication to the City but have not yet been accepted for maintenance, provided that the Responsible Entity (RE) executes a liability waiver on a form to be provided by the Department of Public Works (GPW) no later than October 1 of each year. If the RE declines City snow removal or fails to provide the required waiver, the RE shall clear the Not Dedicated Streets for which it is responsible within 24 hours after final snowfall or ice accumulation. A list of street classifications is located in [Appendix 5](#).

PARKING

Applying chemicals and plowing are difficult operations to perform. Therefore, residents are asked to park in their driveways when snow is anticipated rather than on the street. This will allow operations to be performed in a safe and time-effective manner. If your property is adjacent to an Emergency Snow Route, parking on the street is prohibited during certain Snow Emergency declarations. Please be familiar with the Snow Removal Management plan and determine what type of street abuts your property using the priority map in [Appendix 1](#), the street list in [Appendix 5](#) or by accessing the online map viewer at <http://gis.gscplanning.com/snow-removal/>.

DRIVEWAYS

During normal snow plowing operations, snow may be placed in your driveway unavoidably. Plows are angled to the right for plowing from the centerline of the street to the curb. These are often referred to as windrows. For this reason, a certain amount of snow will be deposited in driveways. Snow placed in driveways or on sidewalks by the City while snow plowing is the resident's and/or property owner's responsibility to remove. Also note that this may occur more than once during a 24 hour period.

SIDEWALKS

Just as important to clearing roads, sidewalks must remain clear for pedestrian traffic. Often, when sidewalks are not clear, pedestrians choose to walk on the cleared street thereby creating unnecessary risk. The City only clears sidewalks adjoining City property. It is the sole responsibility of all property owner and/or the occupant to keep that portion of sidewalk(s) adjoining their property clear of snow and ice. Such snow must be removed within 24 hours following a snowfall or accumulation of a snowdrift. When a Snow Emergency is declared, this deadline shall be extended to 72 hours and a notice will be posted on the City's website as outlined in the [Public Notices, Alerts and Media](#) section.

FIRE HYDRANTS

Rapidly pinpointing location and having unencumbered access to fire hydrants when responding to a fire is imperative to save lives and protect property. During large snowfalls, the Georgetown Fire Department (GFD), when not responding to calls, may attempt to clear snow and ice from hydrants. However, it is the ultimate responsibility of all property owners, who have a hydrant adjoining their property, to keep an area around the hydrant free and clear of any snow or ice within 24 hours following a snowfall.

The area cleared shall be at minimum:

- Three (3) Foot Clearance Encircling the Hydrant
- Four (4) Foot Wide Access Path From the Street
- The Hydrant Must Be Visible From the Street

REFUSE COLLECTION SERVICES – HERBIE

During conditions of snow and ice, all persons receiving trash collection from the City shall be responsible for ensuring that trash containers (Herbies) are accessible and are placed in such a manner that sanitation crews and automated equipment can safely remove the containers from the person's property.

PRIVATE PROPERTY SNOW REMOVAL

It is unlawful for any person to place snow on any portion of a traveled street, alley, sidewalk or driveway constructed as a continuation of sidewalk.

HELPFUL TIPS

TRAVEL

When deciding to travel please consider carpooling with a neighbor or coworker who has a four wheel or all-wheel drive vehicle. While traveling please consider the following recommendations:

- Proceed well below the speed limit
- Test stopping distance in an open flat area on a low volume street, away from intersections and other vehicles by slightly pressing the brakes at a low speed until you begin to feel slippage
- Always press lightly on the accelerator
- Do not slam on the brakes
- Ease into turns and do not cut the wheel to one side while accelerating
- Use extra caution on hills, bridges and curves

DRIVEWAYS

If you have already shoveled or plowed your driveway before the street is plowed, clear an area to the left of the driveway entrance (standing in the driveway facing the street). This space often helps minimize the amount of snow left in front of your driveway by the plows.

REMOVING SNOW IN GENERAL

Shoveling snow is always easier when there is less of it. Instead of waiting until the snow has ceased accumulating, consider shoveling multiple times during the storm. Shoveling four inches of snow three times is less strenuous than removing twelve inches of snow one time. In addition, by clearing early and often, ice and snowpack are less likely to form and can remove the need to spread a deicing agent thereby saving money and reducing chemical hazards.

PREVENTING ICE

Using ice melt on your driveway entrance and sidewalks early and often will help to prevent snow from forming into ice. Using rock salt or other Sodium Chloride products can kill plants and trees. An ice melt product with Calcium Chloride or Potassium Chloride typically performs better than rock salt (smaller amount per application) and is more environmentally friendly. Lastly, always be aware of pets and children around ice melt since skin contact and ingestion can be hazardous.
